**Edward Henning : Kalacakra and the Tibetan Calendar (Treasury of the Buddhist Sciences)** before purchasing it in order to gage whether or not it would be worth my time, and all praised Kalacakra and the Tibetan Calendar (Treasury of the Buddhist Sciences):

3 of 3 people found the following review helpful. The ReferenceBy O. BeltramiMy interest in the Tibetan Calendar is professional, as my job is to predict worldwide public holidays for many years into the future, for most of the world's

leading diary and calendar publishers, as well as large multi-nationals and shipping and logistics companies. As such, having scoured the internet for sources of information as to the rules for calculating the Tibetan calendar (real mathematics, not just some gooey new-age mumbo-jumbo) I can safely say that this is "the" reference on the Tibetan calendar. Note that the book's website supplies the needed tweaks to extend the book's coverage of the Tibetan calendar to the Bhutanese and Mongolian calendars.

3 of 3 people found the following review helpful. academicBy Sumdudethis book is not for people who just want to know about the tantra and the Tibetan Calendar.. its a scholarly book, with ALOT of math and tables. It is a detailed explanation as to why the Tibetan Calendar works the way it does and how it ties into the tantra.... but mostly math..alot of math..good for a collection or graduate college student

8 of 9 people found the following review helpful. Brilliant!By Michael ErlewineI am a well-known astrologer, have studied and practiced Tibetan Buddhism for over 35 years, and was the first person to write a software program on Tibetan astrology. I read Tibetan script, have been on pilgrimage to Tibet a number of times, etc. All of this just to give my credentials so that I can make this clear:Edward Henning's book is a marvelous piece of scholarship and research. It answered questions I was never able to understand and lays out all of the issues with the Tibetan calendar (and the astrology connected to it) with clarity and insight. I consider this the definitive book on the subject and am very grateful to the author for making this very complex subject accessible. Thanks!

Kalacakra and the Tibetan Calendar describes the contents of current Tibetan almanacs, from basic mathematics to symbolic and historical information. Essential for understanding the Kalacakra Tantra's first chapter, this book describes the origin of the calendrical systems in this Tantra and translates and elucidates the relevant sections from its famous commentary, the Vimalaprabha. The main calendars in use in Tibet today have remained unchanged since the 15th century, when lamas in several different traditions tried to make sense of the calculation systems they had inherited from India, and to adjust them to remove increasingly obvious errors. This book analyzes the main systems that survive today, assessing their accuracy and comparing them with the methods described in the original Tantra. Published by American Institute of Buddhist Studies (AIBS)

About the AuthorEdward Henning is a mathematician with a long career in computer journalism and a programming. An experienced translator, he has specialized in Kalacakra literature for more than three decades.
