S. Shrimali : Scientific Facts in the Rgveda before purchasing it in order to gage whether or not it would be worth my time, and all praised Scientific Facts in the Rgveda:

The Rgveda is the oldest book that is available to the mankind. It is one of the most revered scriptures too. As a holy book it has ever been studied, but to rummage it for scientific facts, is not so common; the author is among the few writers attempting it. The author, of course, has depended on the Nirukt, and the explanations of the RcQS as made by Swami Dayanand, besides putting his own views here and there. Only such fields of science, have been explored, where substantial amount of material, is available -others have been ignored.
