**From Worldwatch Institute : State of the World 2009: Into a Warming World (State of the World)** before purchasing it in order to gage whether or not it would be worth my time, and all praised State of the World 2009: Into a Warming World (State of the World):

2 of 2 people found the following review helpful. Pretty Honest Assessment of The State of the WorldBy James AdcockI find this a pretty honest assessment of this books title statement: The State of the World. It follows IPCC 2007 pretty closely. People interested in this book ought to read the Summary for Policymakers at the IPCC site also.

People who want to get \*really\* technical and into this issue ought to read the 2007 IPCC Assessment Reports, also available thru .1 of 1 people found the following review helpful. Lots of data, but a bit too general and repetitive in places  
By James Hochschwender  
This annual version is of the state of the world in relation to global warming and is a rehash of earlier versions with a little update of some of the information. It does cover alternatives for limiting or even reducing hothouse gases, which are down to earth practical, not pie-in-the-sky theory. A very useful book for people new to the subject.  
0 of 0 people found the following review helpful. Excellent and inexpensive

Love the book. I got this for my daughter taking an online class. It is ridiculous how expensive books are at the campus book store. This book was in excellent condition and by using one day shipping, we got it right away. No hassles and no huge expense. Thanks so much!!! I highly recommend this product and seller.

A comprehensive guide to global warming and the steps we must take to combat it. The evidence continues to mount: melting ice caps, rising temperatures, increasingly frequent natural disasters. As the devastating effects of global warming come into sharper focus, societies must work to both mitigate greenhouse gas emissions and adapt to ongoing and inevitable climate change. The actions taken in the coming century will be critically important in determining whether or not we can salvage our environment. We cannot shrink from the overwhelming magnitude of climate change or the radical solutions it demands. The Worldwatch Institute's State of the World 2009 investigates a wide range of potential paths to change, including new technology, policy changes, consumption, and finance, with the ultimate goal of mobilizing humanity around climate change and revealing global warming as one of the truly great challenges of our time.
