Neil F. Michelsen, Rique Pottenger : The American Ephemeris for the 21st Century, 2000-2050 at Noon before purchasing it in order to gage whether or not it would be worth my time, and all praised The American Ephemeris for the 21st Century, 2000-2050 at Noon:

2 of 2 people found the following review helpful. American EphemerisBy WizardI've been doing horoscopes for 36 years. The american ephemeris is accurate and easy to read..and in constant use in my house to track planetary motion, so I can ascertain what's happening.The bindings last about 5-6 years so periodically I have to purchase replacements.

has the rights @the best price!1 of 1 people found the following review helpful. american ephemeris to the 21st centuryBy Bernard Hainesthis book will be a very valuable tool in my library. The rosicrucian fellowship used to put out an wepheris but the concise one as this is the wave of the future apparently.2 of 2 people found the following review helpful. The best Ephemeris ever!By Janet AmidAs a professional astrologer with over 35 years of experience - this is my favorite EPHEMERIS. It's clear, precise, informativeIt's clear, precise, informative. I love it!

Since the 1976 publication of his first version of The American Ephemeris, 1931-1980, Neil F. Michelsen's groundbreaking series of ephemerides have consistently set standards for accuracy in astrology, becoming indispensable to astrologers worldwide at every level from student to professional. The tradition continues with this Revised Expanded Third Edition of The American Ephemeris for the 21st Century, 2000-2050 at Noon. Revisions and additions are programmed by Rique Pottenger, who became head programmer for ACS Publications after Michelsen's passing. Additions and improvements include new Jet Propulsion Laboratory data and programming refinements that enable finding double ingresses in a single day plus more accurate station times. A new formula increases the accuracy of the Galactic Center. Phenomena in the Astro Data section are now sorted by time as well as by date, and R appears with Planetary Ingress Data if a planet is retrograde when it ingresses. The most notably obvious additions in this new edition include the dwarf planet Ceres in daily longitude listings between Mars and Jupiter, and monthly positions are given for Eris, Chiron, Pallas, Juno and Vesta.
