Robert Hand : The Astrolabe World Ephemeris: 2001-2050 At Noon before purchasing it in order to gage whether or not it would be worth my time, and all praised The Astrolabe World Ephemeris: 2001-2050 At Noon:

1 of 1 people found the following review helpful. The totally complete EphemerisBy Gil GarverThis ephemeris contains all the information the astrologer could possibly want. The longitude and declination of the planets and the major asteroids including the all important Chiron is incorporated. My only gripe is that the eclipses are noted by date and time but not by the exact degree, an inexplicable oversight. Also the nodes are given as the mean and not the true. That may or may not be important to the reader.0 of 0 people found the following review helpful. Large PrintBy NamasteBig print which is great if you're farsighted! No more struggling to read.0 of 0 people found the following review helpful. Five StarsBy CraigMan, packed with the charts needed for this kind of need.

Featuring Longitudes and Declinations for the Sun, Moon, Planets, Chiron and the Asteroids. The Astrolabe World

Ephemeris combines reading ease and clarity with 21st Century accuracy and precision of data. This unique ephemeris is one of the most complete and convenient references available for astrological calculation. Includes: daily longitudes and declinations for the planets calculated to the second of arc, Chiron and the four major asteroids, Void-of-Course Moon data, 12 hour Moon positions, Monthly planetary and Lunar ingresses, Lunar phases and an introduction by Robert Hand.
